

POLAR™ GRIP

Holds on tight.

Polar™ Grip is a 3.2 mil (80μ) premium, matte white polymeric self-adhesive PVC film with a high coat weight, aggressive permanent clear acrylic adhesive.

The film's unique high bond adhesive is designed to stick to products with low surface energy, making it suitable for adhering graphics or decals to machine equipment, motorcycle helmets, Sintra, or other smooth plastic substrates.

Unlike most self-adhesive vinyls, Polar™ Grip has a thicker adhesive layer that creates a tighter grip on porous materials. When applications require greater flexibility and high bond adhesion, Polar™ Grip is an ideal choice.

Polar™ Grip is compatible with (eco) solvent, UV and latex wide-format inkjet printers. Available in widths up to 54" (1372mm).
