

PROTAC™ OVERLAMINATES

Protac™ overlaminates are PVC, PET and polycarbonate base films that have a solvent acrylic adhesive.

They add depth and detail to images, whether they are photographic, inkjet or other output media. These high quality laminating films both enhance and protect graphics for greater longevity.

FIRM BOND

- Can be applied quickly and easily
- PVC films provide UV protection for indoor and outdoor use
- Protac™ Emerytex® provides a slip-resistant finish for floor graphics

PRESSURE SENSITIVE

What to Laminate

- Digital prints and photographs
- Advertising and POP displays
- Tradeshow graphics and event signage
- Mouse pads, placemats or counter graphics

Where to Use

High traffic display areas where:

- Specific lighting conditions cannot be controlled
- Graphics will be viewed under direct lighting from different angles
- Graphics may be subject to extensive handling

Photo albums and photo books
