

# Transform Printed Images into Easy-to-Install Window Graphics with **WindowTac®**

WindowTac® is a clear, double-sided mounting adhesive on a 0.9 mil (23µ) clear PET carrier. Its unique embossed release liner allows the adhesive to be easily installed with minimal effort, making WindowTac® ideal for face mounting of temporary graphics to glass, acrylic and other non-porous surfaces.

Simply adhere printed images to the side with the permanent acrylic adhesive and apply the removable textured acrylic adhesive side to a clean mounting surface. With WindowTac®, there is never any need for wet application. Graphics can be dry installed, cleanly removed and easily re-positioned during installation thanks to micro grooves in the removable adhesive that allow for easy air evacuation with a squeegee. The result? Graphics with excellent clarity and no bubbles or wrinkles.

WindowTac® works well for short-term promotional window advertising and POP displays, backlit display cabinets, glass cooler doors, and light boxes. It can be used on media that is compatible with (eco) solvent, UV and latex printers. Available in widths up to 54" (1372mm).

For a matched component solution, pair WindowTac® with EarthSmart™ Eclipse blockout banner media to create double-sided window graphics. EarthSmart™ Eclipse is compatible with UV printers.
